

PRIYANKA MUCHANDIKAR

SOFTWARE DEVELOPER

☎ (831)512-4224 ✉ priyamuchandikar@gmail.com 🔗 linkedin.com/in/priyanka-muchandikar 🐙 https://github.com/pnkcompany/

SKILLS

- Spring Framework
- Spring-boot
- Relational Databases
- Hibernate
- NoSQL
- Cassandra
- Amazon Web Services (AWS)
- JavaScript
- React.js
- Apache Kafka
- Java
- jersey framework
- JSP
- Git
- jenkins
- kafka
- nodejs

EDUCATION

Bachelor in Computer Science

Jain College of Engineering

2011 - 2014

Diploma in Computer Science

Bharatesh Polytechnic

2008 - 2011

WORK EXPERIENCE

Software Developer

TekHub Inc

2022 - Present

- Java spring-boot based application to collect data from camera sensor via MQTT protocol to store(s3) and process in AWS cloud.
- Working with UI/UX team to design react-based web components.
- Display live feed from more than 10000+ devices.
- Contributed to the design and development of underlying AWS, and Kafka architecture.
- added various alerts based on log analysis (device status,threshold of hourly data per device)

Software Developer

SFBU

Jan 2021-Aug 2022

- Build a complete blockchain-powered cryptocurrency from scratch.
- Created blocks using sha256.
- Built Entire application using JavaScript, node server, and ReactJS.
- Created Peer-Peer connections to showcase Chains can be created on multiple nodes
- Started peers through alternate ports, and broadcasted chains when blocks were mined through the api.
- Implementing signature generation and verification to make transactions official
- Created Digital wallets using public and private keys (Digital Signatures)
- Added APIs to Mine transactions from a pool of transactions
- Added web pages that allow users to check and create new transactions on the chain

Software Engineer

battenfeld-cincinnati

May 2017 - Jan 2019

- Helped team with various phases of Software Development Life Cycle (SDLC) such as Planning, Analysis, Design, Implementation, Testing and Maintenance of Web Based and Client-Server Architectures.
- Conceptualized, designing, and coding technical solutions using Spring-boot and react technology stacks to satisfy complex business problem statements.
- Designed and developed Kafka-based architecture to trigger or queue the events for processing by various components of the project.
- lead migration from monolith design to microservice architecture.
- Developed a microservice project to apply or adjust the tax info on existing open invoices using spring-batch processing.
- Helped the UI team to develop various components for invoices.
- Added feature to convert HTML to PDF files for printing or downloading files using thymleaf and flying saucer lib
- helped move a project from spring hibernate to spring-boot.
- Worked on developing scalable applications and optimizing performance using Cassandra database, focusing on data modeling, query optimization, and cluster management.

Full Stack Engineer

Penn State University

Jan 2015 - 2017

- Involved in design, development of Spring Boot Cloud applications hosted on AWS.
- Developed critical features involving Distributed caches and queues like Redis and Kafka.
- Added CURD operations for collecting customer details.
- Added API for bulk processing of various APIs, so that we can add and subscribe customers/students to respective sessions. onboarding to various programs.
- Designed low-level solutions for application and implemented spring based REST services using Spring MVC, JSON and designed the micro services architecture using annotations based configurations.
- Implemented Data access logic using Spring Data, Hibernate with JPA using custom hibernate convertors and criteria builders.
- Writing unit test using mockito, wiring integration tests and writing custom JSON deserializer
- Generated various year-end report data in the backend and created the GUI page for the same using HTML, JSP, JavaScript.
- Added feature to generate and download pdf/csv file of these reports
- Updated existing methods in entire projects with proper logging and error handling pattern
